SUBJECT: Job Responsibilities During Employment With APS

Dan Coopriders has worked for APS for approximately one year in the capacity of a Project Scheduler. Dan was charged with creating and maintaining schedule files for major power plant construction projects, as well as analyzing schedules and recommending action.

Dan was the only Project Scheduler the company has had until recently and therefore, did his job with an absence of formal procedures. Dan was also instrumental in selection of software packages for scheduling, including APS' purchase of PROJACS and TMAPS and in developing our use of scheduling.

Dan's expertise in handling the tools for scheduling is outstanding and his general knowledge of construction projects is more than adequate. His high degree of dedication to his job has been evident since he began work and his expertise will now be missed.

Dan is leaving APS for another opportunity which will increase his experience and salary.

Manager
Capital Budget Administration
